Rounds covered

Round 1 - Write the name of the round and the questions (DSA /AI)

Round 2 - Write the name of the round and the questions

HR Round - Write the name of the round and the questions

Round 1

Airtel Payments Bank - Interview Questions

ROUND NAME / TYPE

1 (Dsa+project)

DATE OF INTERVIEW

29/09/2026

INTERVIEWER NAME (OPTIONAL)

DURATION / MODE (ONLINE / OFFLINE)

offline

Example: Aptitude test / Group discussion / Technical screening. Write what your round was called.

Questions asked in this round

Q1

1. DSA — Longest Substring Without Repeating Characters

The interviewer asked:

“Find the longest substring without repeating characters.”

They specifically asked me to **first explain the approach and simultaneously write the code on paper.**

I explained the **sliding-window / two-pointer approach**:

Q2

The interviewer then asked about my **RAG-based project** and went into several technical details.

1. What was the prompt you used in your RAG application?

They wanted to understand how I instructed the LLM to generate answers from the retrieved context.

2. What database did you use?

They asked specifically about the database/vector database used for storing embeddings and performing similarity search.

3. Explain a scenario-based question.

The interviewer gave a hypothetical scenario related to the RAG system and asked how I would handle it.

The focus was on understanding whether I could apply RAG concepts to a **real-world situation**, rather than just explaining definitions.

4. What types of prompting techniques do you know?

I was asked about different prompting techniques, such as:

	• Zero-shot prompting • Few-shot prompting • Role prompting • Chain-of-thought prompting • Instruction prompting • Structured prompting 5. How does data flow from one component to another in your RAG system? The interviewer wanted me to explain the complete data flow/architecture of my project. I needed to explain the pipeline roughly as: User Query → Query Processing → Embedding Model → Vector Database → Similarity Search → Retrieved Documents/Chunks → Prompt Construction → LLM → Generated Answer → User
